

## ASSIGNMENT 2:

1) Pull any image from the docker hub, create its container, and execute it showing the output.

The '**docker pull**' is a Docker command to download a Docker image or a repository locally on the host from a public or private registry.

**SYNTAX:** docker pull [OPTIONS] NAME[:TAG] @DIGEST]

```
C:\Users\RAJESWARI DEVI>@7644d96957a2:/
C:\Users\RAJESWARI DEVI>docker pull centos
Using default tag: latest
latest: Pulling from library/centos
a1d0c7532777: Pull complete
Digest: sha256:a27fd8080b517143cbbab9dfb7c8571c40d67d534bbdee55bd6c473f432b177
Status: Downloaded newer image for centos:latest
docker.io/library/centos:latest

C:\Users\RAJESWARI DEVI>docker run -it centos
[root@7644d96957a2 /]# ls
bin  etc  lib  lost+found  mnt  proc  run  srv  tmp  var
dev  home  lib64  media  opt  root  sbin  sys  usr
[root@7644d96957a2 /]# vi sample1
[root@7644d96957a2 /]# cat sample1
hi
hello
welcome to centos
[root@7644d96957a2 /]#
```

After pull an image from the docker hub we have to run it or execute by using below command

**Syntax:** docker run [OPTIONS] IMAGE [COMMAND] [ARG...]

```
C:\Users\RAJESWARI DEVI>@7644d96957a2:/
C:\Users\RAJESWARI DEVI>docker run -it centos
[root@7644d96957a2 /]# ls
bin  etc  lib  lost+found  mnt  proc  run  srv  tmp  var
dev  home  lib64  media  opt  root  sbin  sys  usr
[root@7644d96957a2 /]# vi sample1
[root@7644d96957a2 /]# cat sample1
hi
hello
welcome to centos

[root@7644d96957a2 /]# vi sample2
[root@7644d96957a2 /]# cat sample2
welcome to docker hub
[root@7644d96957a2 /]# cp sample1 sample3
[root@7644d96957a2 /]# cat sample3
hi
hello
welcome to centos
[root@7644d96957a2 /]#
```

After that we have to create a sample1, sample 2 files. We have to copy file from sample1. Finally I removed sample2 file.

```

@7644d96957a2:/
welcome to centos

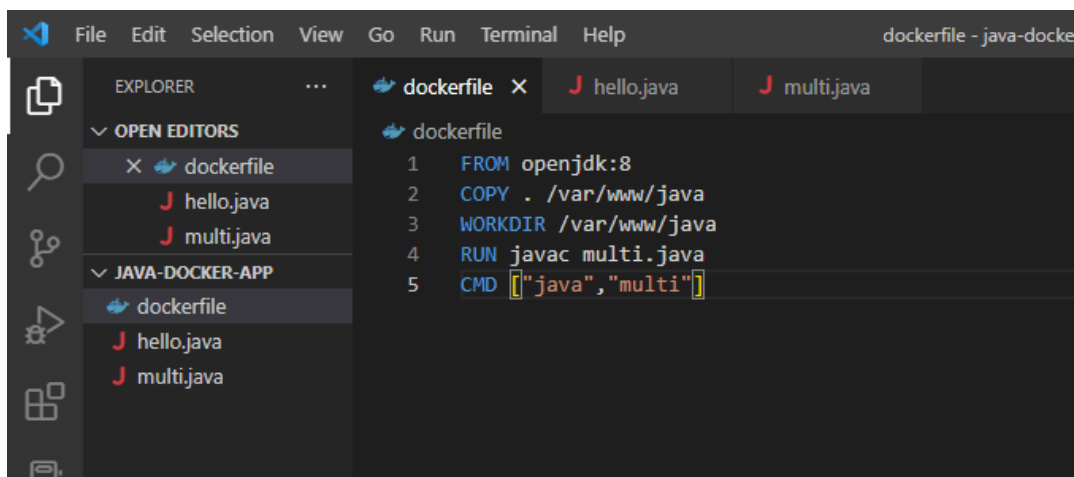

[root@7644d96957a2 /]# vi sample2
[root@7644d96957a2 /]# cat sample2
welcome to docker hub
[root@7644d96957a2 /]# cp sample1 sample3
[root@7644d96957a2 /]# cat sample3
hi
hello
welcome to centos

[root@7644d96957a2 /]# ls
bin  etc  lib  lost+found  mnt  proc  run  sample2  sbin  sys  usr
dev  home  lib64  media  opt  root  sample1  sample3  srv  tmp  var
[root@7644d96957a2 /]# rm sample2
rm: remove regular file 'sample2'? y
[root@7644d96957a2 /]# ls
bin  etc  lib  lost+found  mnt  proc  run  sample3  srv  tmp  var
dev  home  lib64  media  opt  root  sample1  sbin  sys  usr
[root@7644d96957a2 /]#

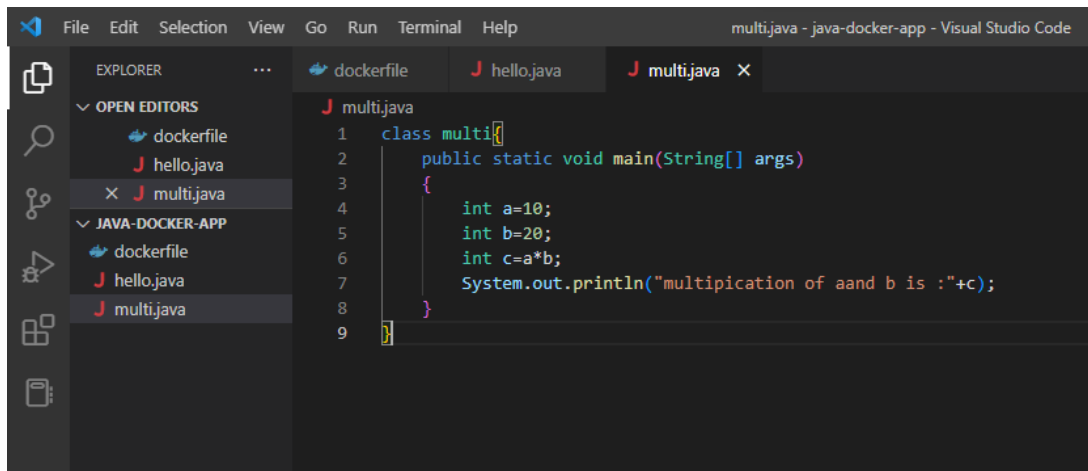

```

**Q2) Create the basic java application, generate its image with necessary files, and execute it with docker.**

First I have created a directory called java-docker-app. In that app now I am creating a java application and a Dockerfile

Now I created multi.java file

Now go to command prompt , I have change the directory to the java-docker-app.

The build command is used to build an image from a Dockerfile, but the command has to be run in the same directory as the Dockerfile.

**SYNTAX:** docker build <options> <directory path or URL>

```
Command Prompt
C:\Users\RAJESWARI DEVI>cd java-docker-app
C:\Users\RAJESWARI DEVI\java-docker-app>docker build -t javaapp .
[+] Building 4.0s (9/9) FINISHED
=> [internal] load build definition from Dockerfile 0.1s
=> => transferring dockerfile: 31B 0.0s
=> [internal] load .dockerignore 0.1s
=> => transferring context: 2B 0.0s
=> [internal] load metadata for docker.io/library/openjdk:8 1.3s
=> [internal] load build context 0.1s
=> => transferring context: 296B 0.0s
=> CACHED [1/4] FROM docker.io/library/openjdk:8@sha256:86e863cc57215c5fb181 0.0s
=> [2/4] COPY . /var/www/java 0.1s
=> [3/4] WORKDIR /var/www/java 0.1s
=> [4/4] RUN javac multi.java 1.7s
=> exporting to image 0.3s
=> => exporting layers 0.2s
=> => writing image sha256:91b0f6b4326ab0a2783a0916fd8a482e7236d48f6f534083 0.0s
=> => naming to docker.io/library/javaapp 0.0s

Use 'docker scan' to run Snyk tests against images to find vulnerabilities and learn how to fix them
C:\Users\RAJESWARI DEVI\java-docker-app>
```

The docker run command first creates a writeable container layer over the specified image, and then starts it using the specified command.

**Syntax:** docker run [OPTIONS] IMAGE [COMMAND] [ARG...]

Command Prompt

Microsoft Windows [Version 10.0.22000.1455]

(c) Microsoft Corporation. All rights reserved.

C:\Users\RAJESWARI DEVI>cd java-docker-app

C:\Users\RAJESWARI DEVI\java-docker-app>docker build -t javaapp .
